Assignment 4: Data Wrangling

Yared S. Asfaw

OVERVIEW

This exercise accompanies the lessons in Environmental Data Analytics on Data Wrangling

Directions

1. Change "Student Name" on line 3 (above) with your name.
2. Work through the steps, **creating code and output** that fulfill each instruction.
3. Be sure to **answer the questions** in this assignment document.
4. When you have completed the assignment, **Knit** the text and code into a single PDF file.
5. After Knitting, submit the completed exercise (PDF file) to the dropbox in Sakai. Add your last name into the file name (e.g., "Fay_A04_DataWrangling.Rmd") prior to submission.

The completed exercise is due on Monday, Feb 7 @ 7:00pm.

Set up your session

1. Check your working directory, load the `tidyverse` and `lubridate` packages, and upload all four raw data files associated with the EPA Air dataset. See the README file for the EPA air datasets for more information (especially if you have not worked with air quality data previously).

```
#Checking the working directory
getwd()
```

```
## [1] "E:/EDA/Environmental_Data_Analytics_2022/Assignments"
```

```
#Loading packages
library(dplyr)
library(tidyverse)
library(lubridate)
```

```
# Importing the datasets

EPAair_O3_2018 <- read.csv("../Data/Raw/EPAair_O3_NC2018_raw.csv",  stringsAsFactors = TRUE)
EPAair_O3_2019 <- read.csv("../Data/Raw/EPAair_O3_NC2019_raw.csv", stringsAsFactors = TRUE)
EPAair_PM_2018 <- read.csv("../Data/Raw/EPAair_PM25_NC2018_raw.csv", stringsAsFactors = TRUE)
EPAair_PM_2019 <- read.csv("../Data/Raw/EPAair_PM25_NC2019_raw.csv", stringsAsFactors = TRUE)
```

2. Explore the dimensions, column names, and structure of the datasets.

```
#The the dimensions, column names, and structure of the dataset EPAair_O3_2018

dim(EPAair_O3_2018)
```

```
## [1] 9737   20
```

```
colnames(EPAair_O3_2018)
```

```

```

Wrangle individual datasets to create processed files.

3. Change date to a date object

```
#Formatting the date to a date object

EPAair_O3_2018$Date <- as.Date(EPAair_O3_2018$Date, format = "%m/%d/%Y")

EPAair_O3_2019$Date <- as.Date(EPAair_O3_2019$Date, format = "%m/%d/%Y")

EPAair_PM_2018$Date <- as.Date(EPAair_PM_2018$Date, format = "%m/%d/%Y")

EPAair_PM_2019$Date <- as.Date(EPAair_PM_2019$Date, format = "%m/%d/%Y")
```

4. Select the following columns: Date, DAILY_AQI_VALUE, Site.Name, AQS_PARAMETER_DESC, COUNTY, SITE_LATITUDE, SITE_LONGITUDE

```
#Selecting the specified columns (Date, DAILY_AQI_VALUE, Site.Name, AQS_PARAMETER_DESC,
#COUNTY, SITE_LATITUDE, SITE_LONGITUDE)

EPAair_O3_2018_sel.col <- select(EPAair_O3_2018, Date, DAILY_AQI_VALUE, Site.Name,
AQS_PARAMETER_DESC, COUNTY: SITE_LONGITUDE)

EPAair_O3_2019_sel.col <- select(EPAair_O3_2019, Date, DAILY_AQI_VALUE, Site.Name,
AQS_PARAMETER_DESC, COUNTY: SITE_LONGITUDE)

EPAair_PM_2018_sel.col <- select(EPAair_PM_2018, Date, DAILY_AQI_VALUE, Site.Name,
AQS_PARAMETER_DESC, COUNTY: SITE_LONGITUDE)

EPAair_PM_2019_sel.col <- select(EPAair_PM_2019, Date, DAILY_AQI_VALUE, Site.Name,
AQS_PARAMETER_DESC, COUNTY: SITE_LONGITUDE)
```

5. For the PM2.5 datasets, fill all cells in AQS_PARAMETER_DESC with "PM2.5" (all cells in this column should be identical).

```
#Replacing the PM2.5 datasets' AQS_PARAMETER_DESC column cells with "PM2.5"

EPAair_PM_2018_sel.col$AQS_PARAMETER_DESC <- "PM2.5"
```

```
# Confirming the replacement
head(EPAair_PM_2018_sel.col$AQS_PARAMETER_DESC, 10)
```

```
##  [1] "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5"
## [10] "PM2.5"
```

```
tail(EPAair_PM_2018_sel.col$AQS_PARAMETER_DESC, 10)
```

```
##  [1] "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5"
## [10] "PM2.5"
```

```
EPAair_PM_2019_sel.col$AQS_PARAMETER_DESC <- "PM2.5"
```

```
# Confirming the replacement
head(EPAair_PM_2019_sel.col$AQS_PARAMETER_DESC, 10)
```

```
##  [1] "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5"
## [10] "PM2.5"

```
tail(EPAair_PM_2019_sel.col$AQS_PARAMETER_DESC, 10)
```

```
##  [1] "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5" "PM2.5"
## [10] "PM2.5"
```

6. Save all four processed datasets in the Processed folder. Use the same file names as the raw files but replace "raw" with "processed".

```
#Saving the processed datasets
write.csv(EPAair_O3_2018_sel.col, row.names = FALSE,
file = "../Data/Processed/EPAair_O3_NC2018_Processed.csv")

write.csv(EPAair_O3_2019_sel.col, row.names = FALSE,
file = "../Data/Processed/EPAair_O3_NC2019_Processed.csv")

write.csv(EPAair_PM_2018_sel.col, row.names = FALSE,
file = "../Data/Processed/EPAair_PM25_NC2018_Processed.csv")

write.csv(EPAair_PM_2019_sel.col, row.names = FALSE,
file = "../Data/Processed/EPAair_PM25_NC2019_Processed.csv")
```

Combine datasets

7. Combine the four datasets with `rbind`. Make sure your column names are identical prior to running this code.

```
#Checking and confirming the similarity of the column names of the datasets
colnames(EPAair_O3_2018_sel.col) # Column names of the dataset EPAair_O3_2018_sel.col
```

```
## [1] "Date"               "DAILY_AQI_VALUE"    "Site.Name"
## [4] "AQS_PARAMETER_DESC" "COUNTY"             "SITE_LATITUDE"
## [7] "SITE_LONGITUDE"
```

```
colnames(EPAair_O3_2019_sel.col) # Column names of the dataset EPAair_O3_2019_sel.col
```

```
## [1] "Date"               "DAILY_AQI_VALUE"    "Site.Name"
## [4] "AQS_PARAMETER_DESC" "COUNTY"             "SITE_LATITUDE"
## [7] "SITE_LONGITUDE"
```

```
colnames(EPAair_PM_2018_sel.col) # Column names of the dataset EPAair_PM_2018_sel.col
```

```
## [1] "Date"               "DAILY_AQI_VALUE"    "Site.Name"
## [4] "AQS_PARAMETER_DESC" "COUNTY"             "SITE_LATITUDE"
## [7] "SITE_LONGITUDE"
```

```
colnames(EPAair_PM_2019_sel.col) # Column names of the dataset EPAair_PM_2019_sel.col
```

```
## [1] "Date"               "DAILY_AQI_VALUE"    "Site.Name"
## [4] "AQS_PARAMETER_DESC" "COUNTY"             "SITE_LATITUDE"
## [7] "SITE_LONGITUDE"
```

```
# Combining the processed data sets using 'rbind'

EPAair_O3_PM25_comb <- rbind(EPAair_O3_2018_sel.col, EPAair_O3_2019_sel.col,
EPAair_PM_2018_sel.col, EPAair_PM_2019_sel.col)
```

8. Wrangle your new dataset with a pipe function (%>%) so that it fills the following conditions:

- Filter records to include just the sites that the four data frames have in common: "Linville Falls", "Durham Armory", "Leggett", "Hattie Avenue", "Clemmons Middle", "Mendenhall School", "Frying Pan Mountain", "West Johnston Co.", "Garinger High School", "Castle Hayne", "Pitt Agri. Center", "Bryson City", "Millbrook School". (The `intersect` function can figure out common factor levels if we didn't give you this list...)
- Some sites have multiple measurements per day. Use the split-apply-combine strategy to generate daily means: group by date, site, aqs parameter, and county. Take the mean of the AQI value, latitude, and longitude.
- Add columns for "Month" and "Year" by parsing your "Date" column (hint: `lubridate` package)
- Hint: the dimensions of this dataset should be 14,752 x 9.

```
EPAair_O3_PM25_common_sites <- EPAair_O3_PM25_comb%>%
  filter(Site.Name %in% c("Linville Falls", "Durham Armory", "Leggett", "Hattie Avenue",
"Clemmons Middle", "Mendenhall School", "Frying Pan Mountain", "West Johnston Co.",
"Garinger High School", "Castle Hayne", "Pitt Agri. Center", "Bryson City", "Millbrook School")) %>%
  group_by(Date, Site.Name, AQS_PARAMETER_DESC, COUNTY) %>%
  summarise(meanAQI = mean(DAILY_AQI_VALUE),
            meanLatitude = mean(SITE_LATITUDE),
            meanLongtiude = mean(SITE_LONGITUDE))%>%
  mutate(Month = month(Date))%>%
  mutate(Year = year(Date))
```

```
common_sites_final <- EPAair_O3_PM25_comb %>%

  filter(Site.Name %in% c("Linville Falls", "Durham Armory", "Leggett", "Hattie Avenue", "Clemmons Middl
  group_by(Date, Site.Name, AQS_PARAMETER_DESC, COUNTY) %>%
  summarise(meanAQI = mean(DAILY_AQI_VALUE),
            meanLatitude = mean(SITE_LATITUDE),
            meanLongtiude = mean(SITE_LONGITUDE))%>%
  mutate(Month = month(Date))%>%
  mutate(Year = year(Date))%>%
  select(Date, Month, Year, Site.Name:meanLongtiude)
```

```
## `summarise()` has grouped output by 'Date', 'Site.Name', 'AQS_PARAMETER_DESC'. You can override using
```

9. Spread your datasets such that AQI values for ozone and PM2.5 are in separate columns. Each location on a specific date should now occupy only one row.

```
# Spreading the AQI values using pivot_wider
common_sites_spread <- EPAair_O3_PM25_common_sites %>%
  pivot_wider(names_from = AQS_PARAMETER_DESC, values_from = meanAQI)
head(common_sites_spread)
```

```
## # A tibble: 6 x 9
## # Groups:   Date, Site.Name [6]
##   Date       Site.Name COUNTY meanLatitude meanLongtiude Month  Year PM2.5 Ozone
##   <date>     <fct>     <fct>         <dbl>         <dbl> <dbl> <dbl> <dbl> <dbl>
## 1 2018-01-01 Bryson C~ Swain          35.4         -83.4     1  2018    35    NA
## 2 2018-01-01 Castle H~ New H~         34.4         -77.8     1  2018    13    NA
## 3 2018-01-01 Clemmons~ Forsy~         36.0         -80.3     1  2018    24    NA
## 4 2018-01-01 Durham A~ Durham         36.0         -78.9     1  2018    31    NA
## 5 2018-01-01 Garinger~ Meckl~         35.2         -80.8     1  2018    20    32
## 6 2018-01-01 Hattie A~ Forsy~         36.1         -80.2     1  2018    22    NA
```

10. Call up the dimensions of your new tidy dataset.

```
dim(common_sites_spread)
```

```
## [1] 8976    9
```

11. Save your processed dataset with the following file name: "EPAair_O3_PM25_NC2122_Processed.csv"

```
#11 Saving the processed dataset

write.csv(common_sites_spread, row.names = FALSE,
file = "../Data/Processed/EPAair_O3_PM25_NC2122_Processed.csv")
```

Generate summary tables

12a. Use the split-apply-combine strategy to generate a summary data frame from your results from Step 9 above. Data should be grouped by site, month, and year. Generate the mean AQI values for ozone and PM2.5 for each group.

```
summary_table_common_sites <- common_sites_spread %>%
  group_by(Site.Name, Month, Year) %>%
  summarise(PM2.5mean = mean(PM2.5),
            Ozonemean = mean(Ozone))
head(summary_table_common_sites)
```

```
## # A tibble: 6 x 5
## # Groups:   Site.Name, Month [3]
##   Site.Name   Month  Year PM2.5mean Ozonemean
##   <fct>       <dbl> <dbl>     <dbl>     <dbl>
## 1 Bryson City     1  2018      38.9      NA
## 2 Bryson City     1  2019      29.8      NA
## 3 Bryson City     2  2018      27.2      NA
## 4 Bryson City     2  2019      33.0      NA
## 5 Bryson City     3  2018      34.7      41.6
## 6 Bryson City     3  2019      NA        42.5
```

12b. BONUS: Add a piped statement to 12a that removes rows where both mean ozone and mean PM2.5 have missing values.

```
summary_table2 <- common_sites_spread %>%
  group_by(Site.Name, Month, Year) %>%
  summarise(PM2.5mean = mean(PM2.5),
            Ozonemean = mean(Ozone)) %>%
  na.omit(PM2.5mean,Ozonemean)

summary_table3 <- common_sites_spread %>%
  group_by(Site.Name, Month, Year) %>%
  summarise(PM2.5mean = mean(PM2.5),
            Ozonemean = mean(Ozone)) %>%
  drop_na(PM2.5mean,Ozonemean)
```

```
#Looking at the columns of PM2.5mean and Ozonemean
head(summary_table3) # No NA value in both PM2.5mean and Ozonemean
```

```
## # A tibble: 6 x 5
## # Groups:   Site.Name, Month [5]
##   Site.Name   Month  Year PM2.5mean Ozonemean
##   <fct>       <dbl> <dbl>     <dbl>     <dbl>
## 1 Bryson City     3  2018      34.7      41.6
## 2 Bryson City     4  2018      28.2      44.5
## 3 Bryson City     4  2019      26.7      45.4
## 4 Bryson City     7  2019      33.6      30.4
## 5 Bryson City     9  2018      25.1      25.4
## 6 Bryson City    10  2018      31.3      31
```

13. Call up the dimensions of the summary dataset.

```
# The dimension of the summary dataset
dim(summary_table3)
```

```
## [1] 101   5
```

14. Why did we use the function `drop_na` rather than `na.omit`?

    Answer:
